Job vacancy:
Python Developer

Profile requested:
Computing, engineering and science professionals
Computing professionals

Job location:
Amsterdam, The Netherlands

Job description:
The employer is a personal shopping platform born in the heart of Amsterdam, looking for a talented Python Developer. Its technology stack consists of Python/Django, MongoDB, Debian, AWS, nginx, Git and more. It works according to Scrum and is big fan of continuous integration.
The position will offer the following advantages: Apple hardware, opportunity to be part of an innovative and fast-growing start-up, a highly responsible position with lots of freedom, integral part of the technology team, a young, informal and crazy dynamic team, men's clothing from premium brands at wholesale prices and lots of high fives.

Key Responsibilities:
- o Take high-level design choices and decide on technical standards, including coding standards, tools and frameworks;
- o Oversee and decide on API's, applications and other components in the SOA environment;
- o Design and develop API's, tools and applications that support the personal shoppers in their day-to-day work;
- o Develop new features and fix bugs for the employer's website;
- o Administration and provisioning of cloud servers (AWS EC2, Linode)

Requirements:
- o Pragmatic, proactive and independent work ethic
- o Excellent communication skills
- o 1-5 years of experience with (web) software development, preferably in PHP, Java, Python, C/C++ or Ruby
- o Experience with relational databases, preferably MySQL
- o Fluent in English

Bonus Points:
- o Experience with Vagrant, Puppet and similar provisioning tools
- o Experience with NoSQL databases, such as MongoDB or RethinkDBExperience with administering Debian or Ubuntu GNU/Linux systems
- o Experience with Amazon Web Services (S3, EC2)

Work starting date: **01-03-2015**
Form of employment: **full time**
Type of contract: **fixed term** *(at least 6 months)*
Gross monthly wage (Euro): **3500**
